

Challenge 5: Organize a school-wide recycling drive (2 Credits)

A recycling drive is a great way for students to not only get excited about recycling, but to also learn about which recyclables exist in their own household. Your recycling drive should encourage students to bring recyclable items from home that can be sent to a Material Recovery Facility (MRF). You can organize a drive for one item (i.e. aluminum cans) or a plethora of items. Just make sure whichever items your drive collects, that they are accepted at your local [MRF](#). Here's a [link](#) to better help you get started with this challenge. Also, another option for a drive is [Terracycle](#). Check them out if you want to guarantee materials from your recycling drive will be upcycled in a useful way!

To receive credit for this challenge, your semester report will have to include:

- Pictures of your recycling drive in action, with students and teachers donating their recyclables from homes
