

Recycling Challenge 6 : Make a Virtual (PSA) video for the community on effective recycling strategies. (0.5 credits per class that creates a video; up to 4 classes / 2 credits. If your school creates a school-wide video that involves more than 4 classes, you will receive the full 2 credits)

Educate the community about recycling through a student video! We encourage creativity from students, faculty and staff. The video can include recycling lessons learned in class, field trips and experiences. To accommodate distance learning, participants can record clips of themselves put together or record a video call session where they explain their topics.

To receive credit for this challenge submit a link to your video(s). Participants can privately send video links through email or google drive.
